Meeting records [📄 Transcript](#)

Summary

Website updates and compliance restructuring via portal strategies and UI refinements.

Website and Portal Redesign

Edward Keyser presented website updates and portal reconfigurations for Revia Life. The team discussed structuring affiliate and compliance landing pages to satisfy regulations.

Shop and UI Improvements

Charlie stone reported formatting and search issues which Edward Keyser agreed to fix. The team finalized navigation changes and bestseller placement.

Content Strategy and Compliance

The team aligned website categories for regulatory compliance and discussed separating supply products. Edward Keyser agreed to build landing pages for A/B testing.

Decisions

Aligned

- **Location of the I2B admin dashboard** The participants agreed to keep the admin dashboard centrally located and specific to the I2B website.
- **Separate URL for affiliate portal** The group agreed to host the affiliate portal and sign-up landing page on a separate URL to establish a legal separation layer.
- **Professional use only banner text standard** The participants agreed to change the website banner text from research use only to professional use only.
- **Bestsellers tab in navigation header** The group agreed to add a bestsellers category and a dedicated bestsellers tab to the website navigation header.
- **Product page destination for QR codes** The participants agreed that product label QR codes will link directly to specific product pages featuring clear COA testing indicators.
- **Real-time search suggestions functionality** The group agreed to implement real-time search suggestions that automatically adapt as the user types.
- **Rotation timing for homepage hero images** The participants agreed to set the homepage hero image auto-rotation timer to three or four seconds.
- **About page simplification and comparison chart** The group agreed to condense text on the about page, prioritize key statistics, and include a comparison chart highlighting company differentiators.
- **A/B Testing Landing Pages with Video** The group agreed to run an A/B test using alternative landing pages with and without a video to evaluate its performance before advancing it to the actual website.

Next steps

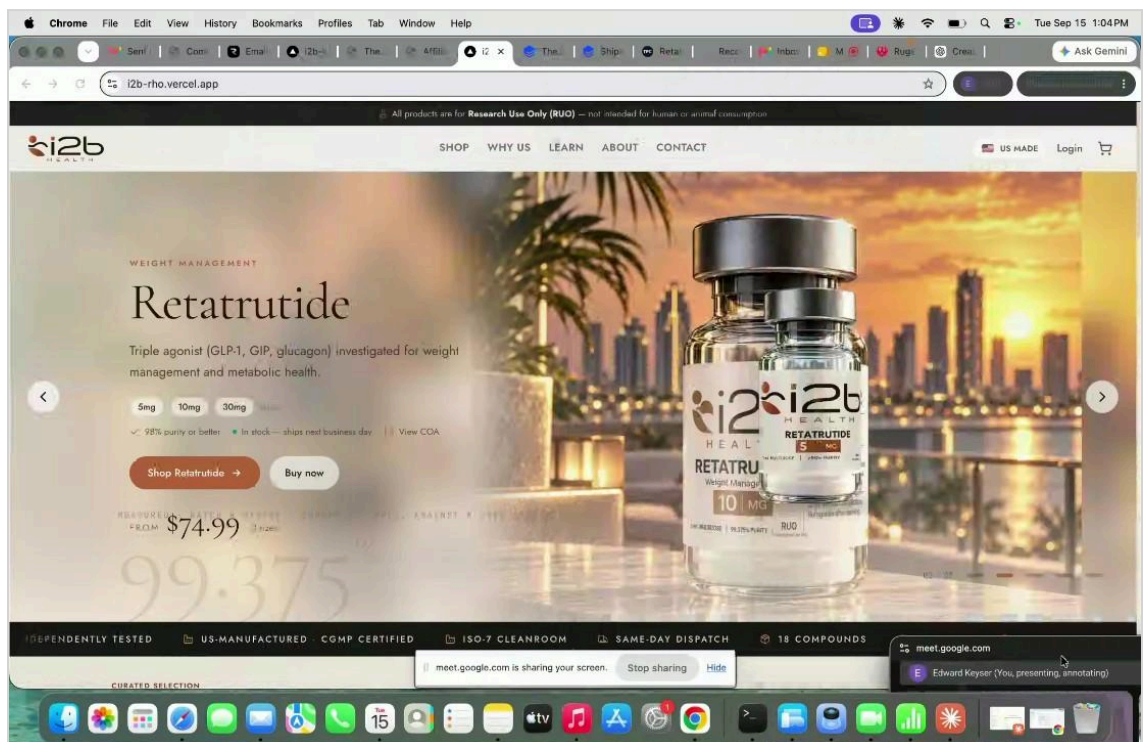

- ☐ [Mike Stone] Request COAs: Contact Lance to retrieve the list of 20 products and their associated certificates of analysis.

- ☐ [Edward Keyser] Update Product Listing: Limit shop page display to the selected 20 products and reorder them to appear at the top of the listings.
- ☐ [Edward Keyser] Add Bestsellers: Include a Bestsellers navigation tab and add the category to the shop page list.
- ☐ [Edward Keyser] Edit CJC Image: Remove the no DAC text from the CJC product image.
- ☐ [Edward Keyser] Reformat Product Images: Center and clean the text labels on shop page product images for better formatting.
- ☐ [Edward Keyser] Generate QR Codes: Bulk create new product QR codes that link directly to each specific product page.
- ☐ [Edward Keyser] Customize QR Codes: Replace the dinosaur icon in generated QR codes with the official company logo.
- ☐ [Edward Keyser] Improve Search: Prioritize search results by closest match and implement real time page adaptation while typing.
- ☐ [Edward Keyser] Optimize Homepage Rotation: Set the homepage hero image auto rotate timer to 4 seconds.
- ☐ [Edward Keyser] Fix Hero Assets: Update homepage hero images with the correct company logo and font.
- ☐ [Edward Keyser] Update Vial Images: Modify product images for GHK, Glow, and Kalo to display blue purple powder in the vials.
- ☐ [Edward Keyser] Clean Hero Images: Remove the stray letter E appearing in the text of the hero images.
- ☐ [Edward Keyser] Align Categories: Sync homepage categories with the shop page to ensure they redirect correctly while maintaining regulatory compliance.
- ☐ [Edward Keyser] Move FAQ: Add FAQ link to the navigation header and provide a preview link for review.
- ☐ [Edward Keyser] Update Website Content: Condense About page text, prioritize key statistics, and integrate a comparison chart on the Why Us page to minimize information overlap.
- ☐ [Edward Keyser] Export Newsletter Data: Generate and send a database snapshot containing all captured newsletter email addresses.
- ☐ [Edward Keyser] Optimize UI Scaling: Increase the size of the login, cart, and Ask a Researcher buttons to improve visibility on high-resolution displays.

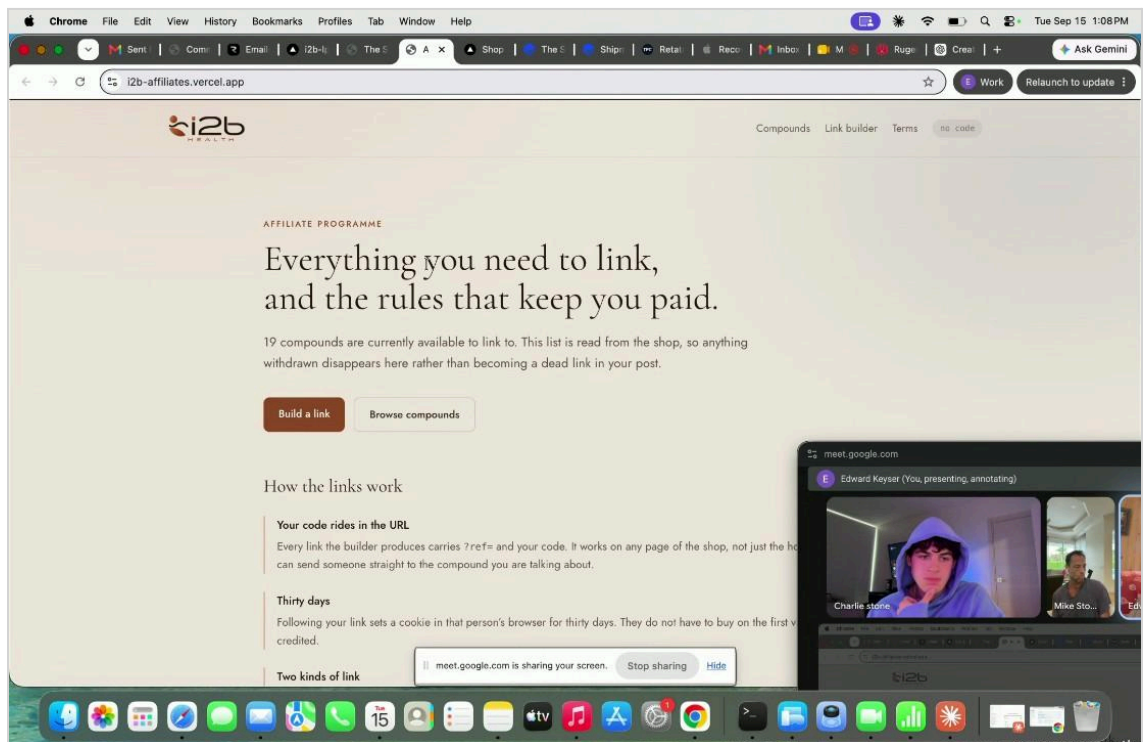

- ☐ [Edward Keyser] Separate Supply Store: Remove accessory products from the main store and provide a link to the dedicated supply site.
- ☐ [Edward Keyser] Provide Image Assets: Deliver hard copies of all site images including the original magic layers for record-keeping.
- ☐ [Edward Keyser] Build Landing Page Baseline: Configure baseline landing pages to support future A/B testing of video content.

Details

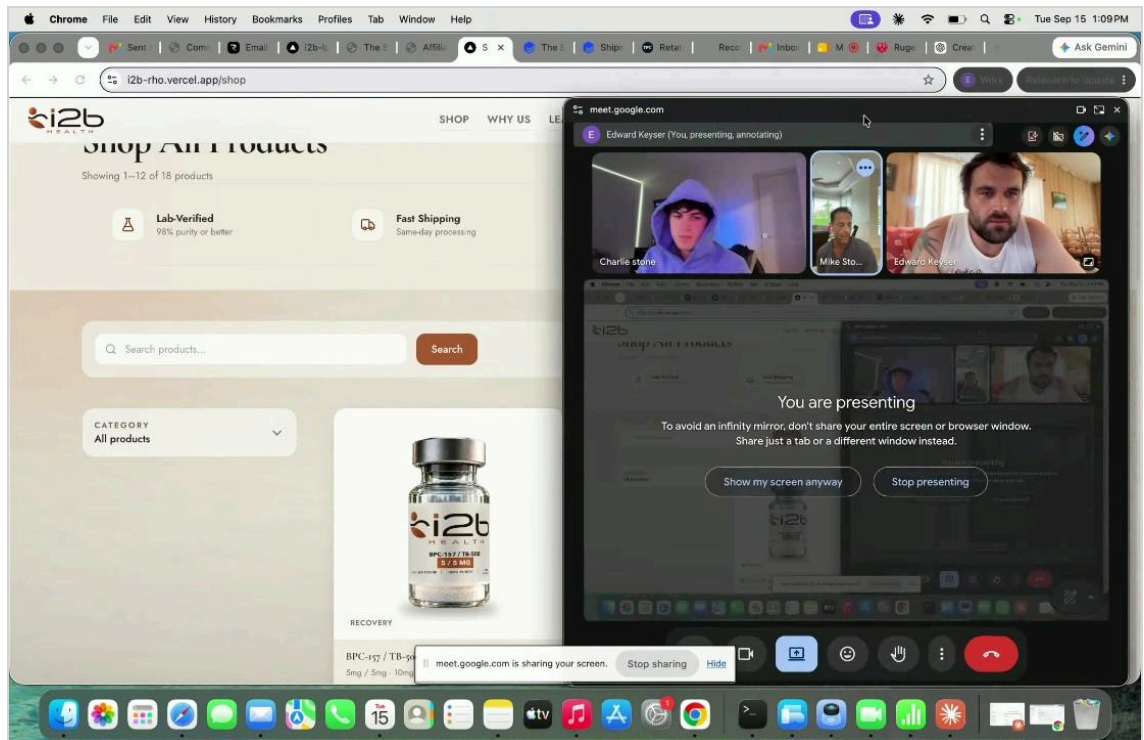

- Website Preview and Hero Section Fixes:** Edward Keyser presented a preview link for website updates and noted that an artificial intelligence tool was actively removing duplicate vial images on the hero section ([00:01:05](#)). Charlie stone identified that the American flag animation on the hero section was not returning after cycling through, prompting Edward Keyser to explain that a translucent overlay is the final step to restore it ([00:04:04](#)). Additionally, Charlie stone pointed out duplicate icons at the bottom of the homepage, which Edward Keyser agreed to address ([00:05:11](#)).

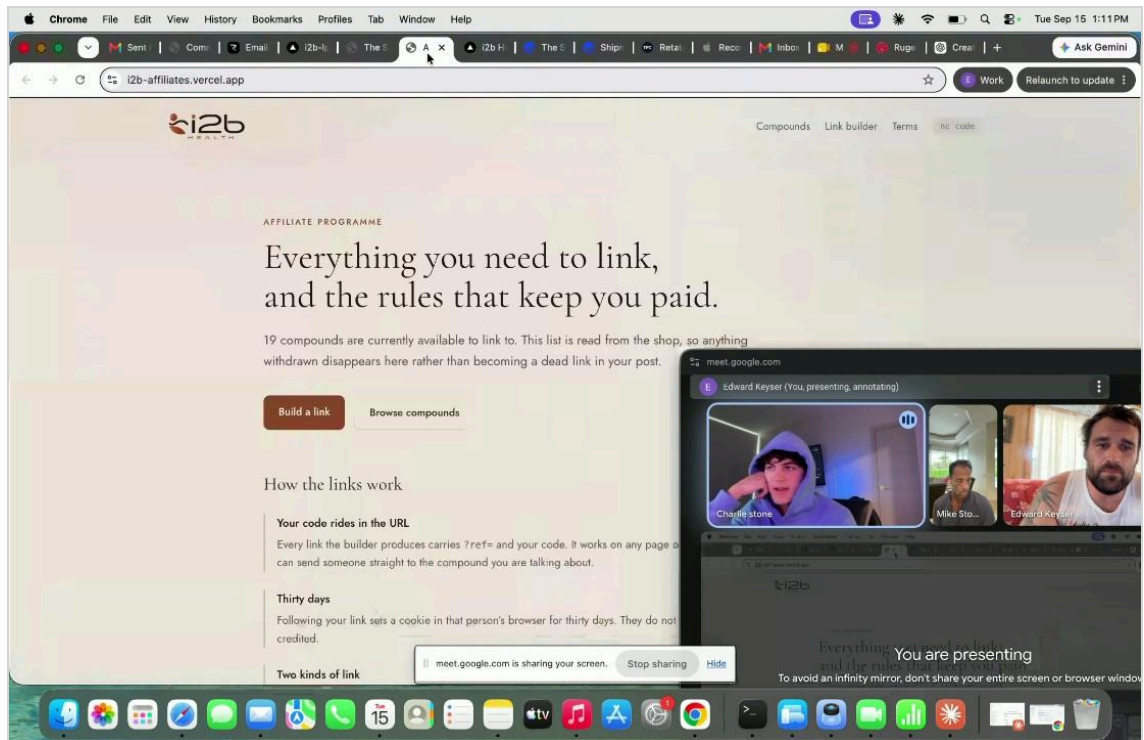

- **Revia Life Portal and Compliance Landing Pages:** Edward Keyser discussed converting the Revia Life website into an exclusive research partner portal containing downloaded YouTube link embeds of Mike Stone's congressional speeches, micro-regulation sections, and compliant blog resources (00:06:23). Edward Keyser also created two separate domain links: an affiliate portal and an education information resourcing mirror site that removes shopping carts and provides micro tidbits with "learn more" buttons linking back to Revia Life (00:07:26).

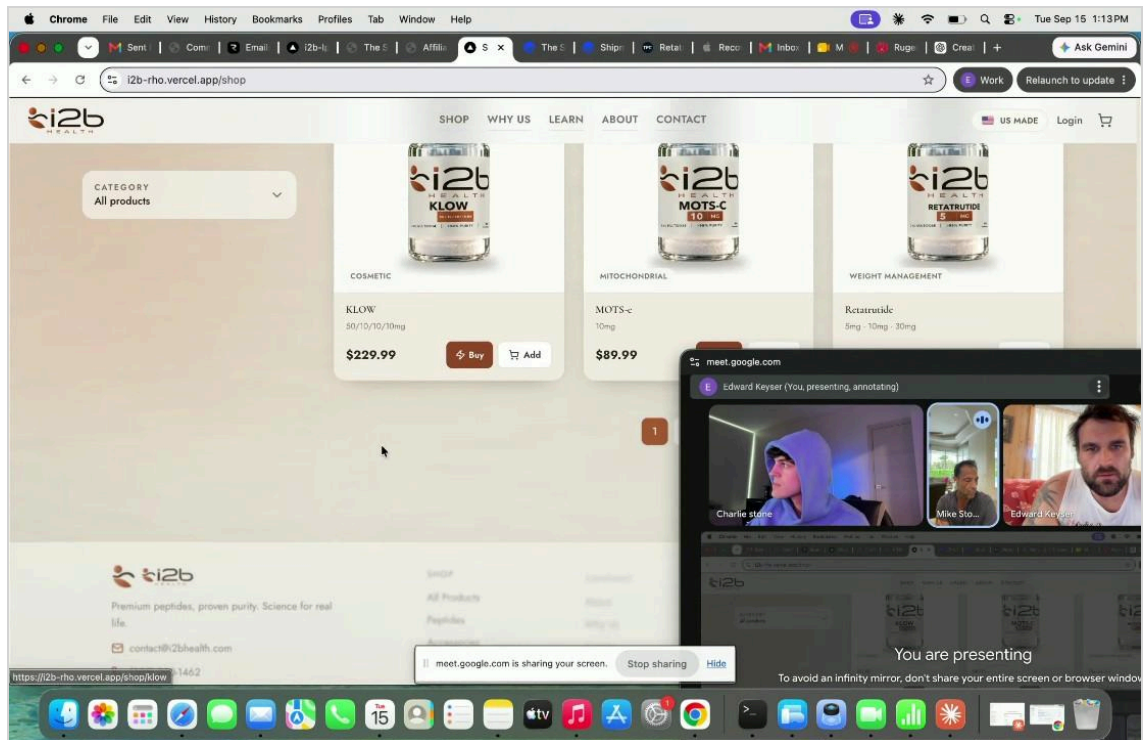

- **I2B Shop Buy Button Formatting and Admin Pricing Management:** Charlie Stone reported a formatting issue with the buy buttons on the I2B shop product cards and provided a screenshot to Edward Keyser. Mike Stone mentioned updating prices and variants in the Revia Life admin dashboard, and Edward Keyser committed to copying those updated prices over to I2B (00:08:36). Mike Stone requested that the admin dashboard remain specific to I2B and asked for capabilities to create orders for individuals, establish accounts, and modify existing orders (00:09:39).

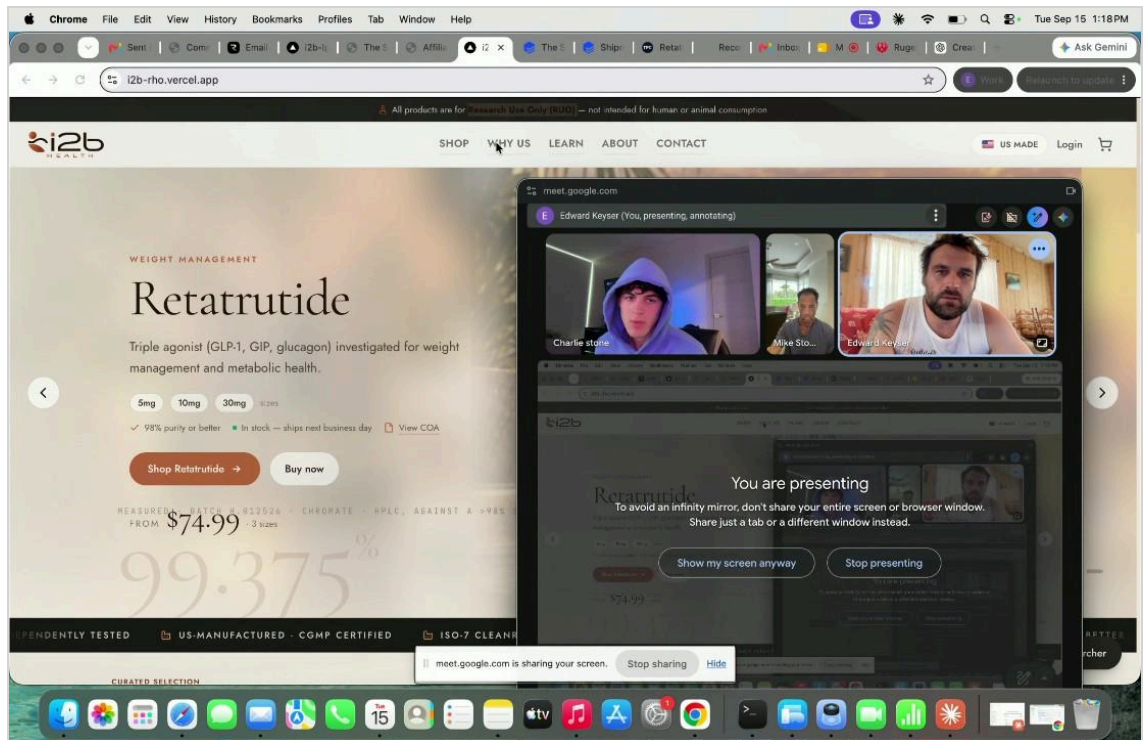

- **Affiliate Program Separation and Regulatory Compliance:** Edward Keyser explained that affiliate linking and signups will be hosted on a separate URL landing page via the I2B admin dashboard to maintain separation between direct representatives and the shop. Edward Keyser emphasized that this structural layer is necessary to satisfy strict Federal Trade Commission and Food and Drug Administration regulations and protect the company from illegal affiliate advertising (00:10:42).

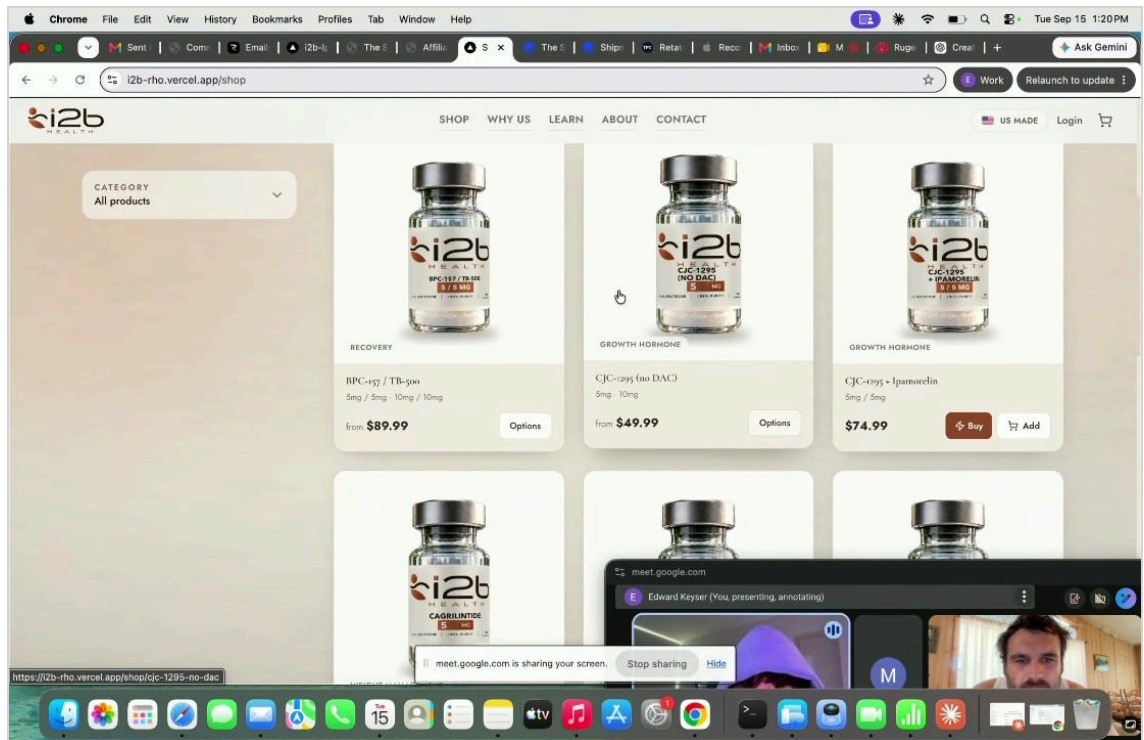

- **Product Stacks Sizing and Category Dropdown Adjustments:** Charlie stone noted that product cards on the shop page repeated sizing information for stacks like BPC-157 and TB-500, and Mike Stone clarified that these represent individual milligram amounts for combined stack ingredients (00:11:39). Edward Keyser agreed to edit the text to explicitly clarify the individual dosages for each peptide component. Furthermore, Charlie stone requested that the shop category dropdown menu remain open by default on computers and iPads while staying collapsed on mobile phones to save screen space, which Edward Keyser acknowledged (00:12:41).

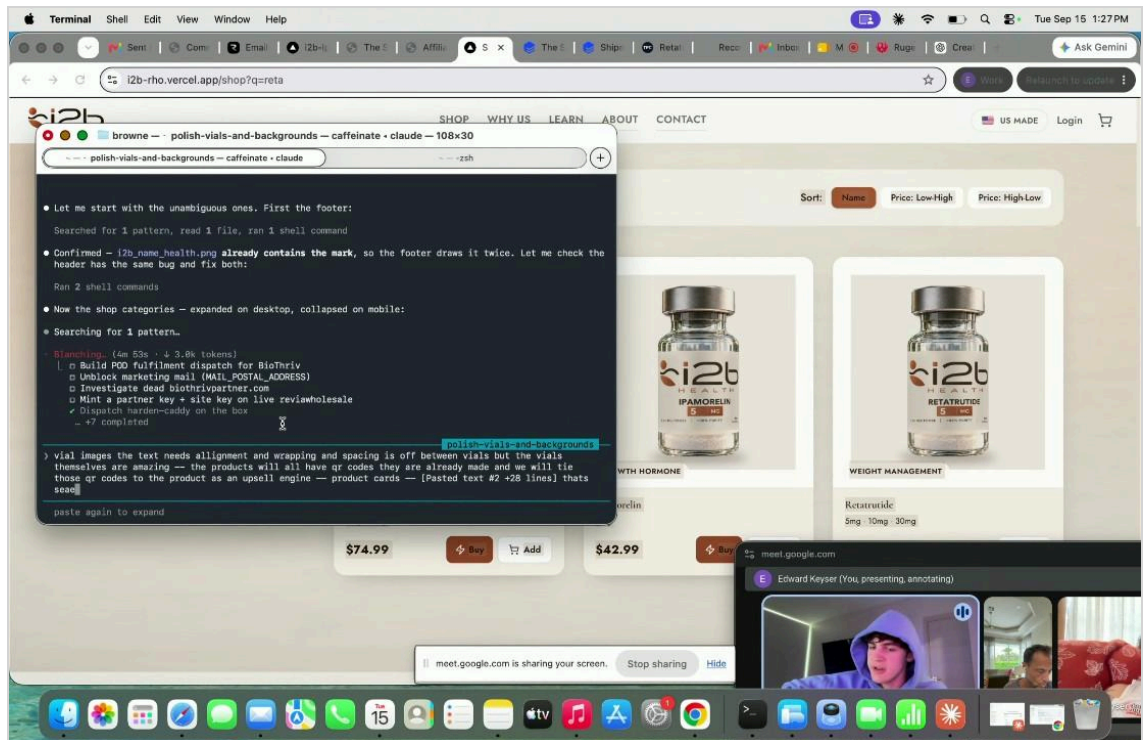

- Product Banner Wording: Research Use Only Versus Professional Use Only:** Mike Stone raised the question of changing the top website banner wording from "Research Use Only" to "Professional Use Only" with the addition of "not intended for human or animal consumption". Edward Keyser and Mike Stone discussed that while "Professional Use Only" creates a gray area regarding human use, it may align with practices used by competitors like Lance and provides better phrasing for qualified research professionals and laboratories, with Charlie stone noting that "professional" sounds better (00:13:46).
- Top Bestselling Products and Navigation Bestsellers Tab:** Mike Stone noted that a request for 20 specific products for certificate of analysis testing was sent to Lance, though they were still awaiting a response. Charlie stone requested that these top 20 tested products appear first on the shop page and proposed adding a dedicated bestsellers tab to the top navigation bar to track analytics over a 30-day period, which Edward Keyser and Mike Stone agreed to implement (00:16:37).

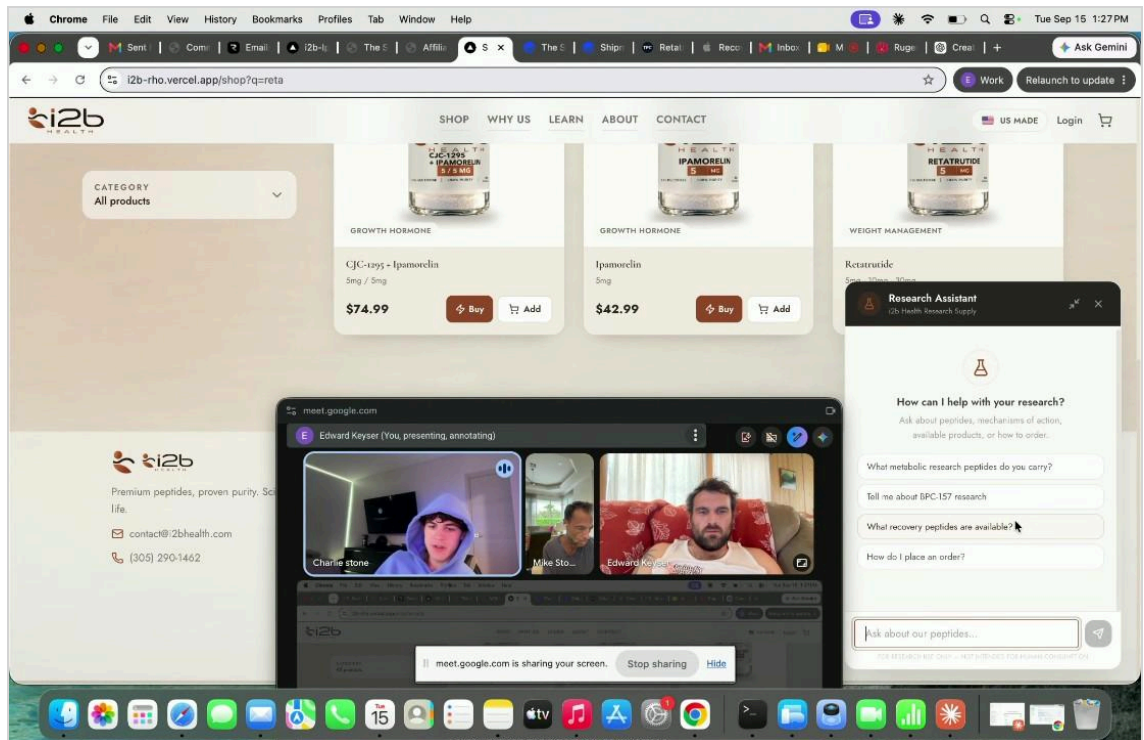

- **Product Image Typography and Layout Refinements:** Charlie stone identified formatting issues with product image text, such as the "no DAC" label on CJC-1925 and misaligned product names over numbers on shop cards (00:19:22). Edward Keyser established a gold standard layout placing product names on a single line above centered milligram measurements, and agreed to clean up the spacing and alignment across the product images (00:20:15).

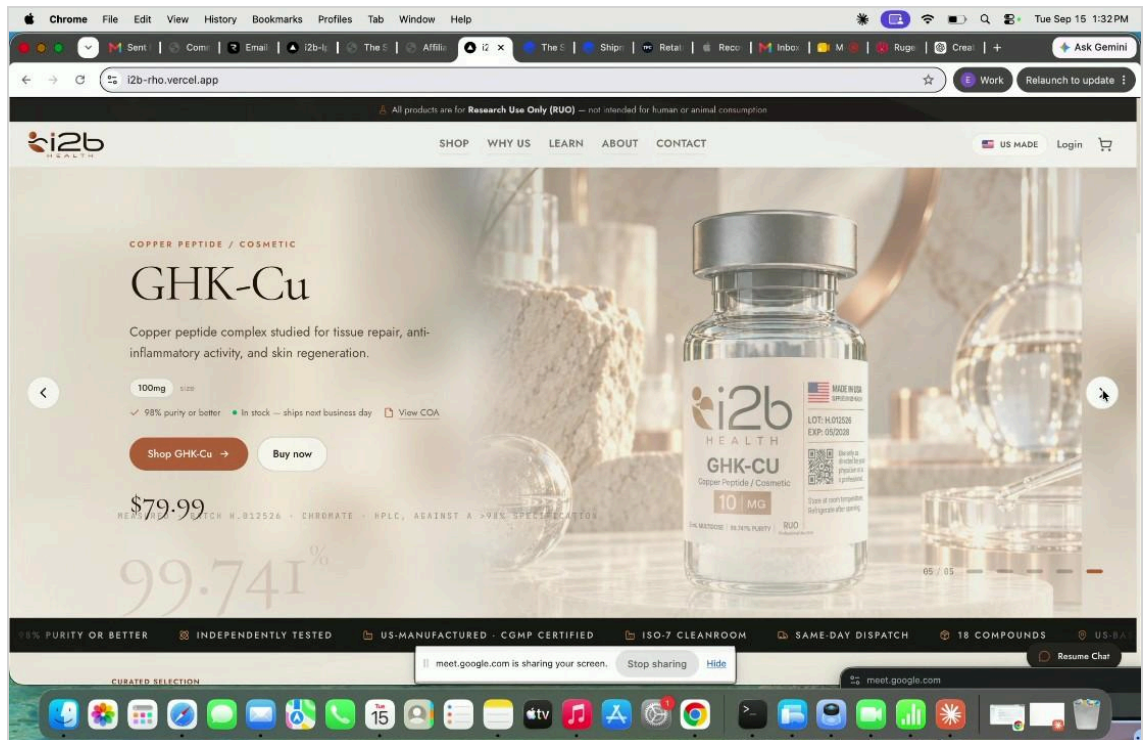

- Product QR Code Destination and Custom Icon Design:** Regarding QR codes on product labels, Mike Stone explained that current home-printed labels link to the website using Chrome-generated QR codes that included an offline dinosaur icon (00:21:25) (00:23:27). After discussing whether codes should link to certificates of analysis or product pages, Charlie stone, Mike Stone, and Edward Keyser reached a consensus that QR codes should link directly to the specific product page with clear certificate of analysis indicators (00:22:25) (00:39:15). Edward Keyser agreed to replace the Chrome dinosaur with a custom QR code featuring a Revia icon (00:40:16).
- Search System Improvements and Live Search Functionality:** Charlie stone reported search inaccuracies, noting that typing "Revia" brought up unrelated peptides before the correct product, and Edward Keyser explained that search results would be reconfigured to prioritize closest matches over alphabetical order (00:24:24). Additionally, Charlie stone suggested implementing live search functionality so that product pages adapt and display matching suggestions automatically as users type without requiring them to click a search button, which Edward Keyser agreed to build (00:26:17).

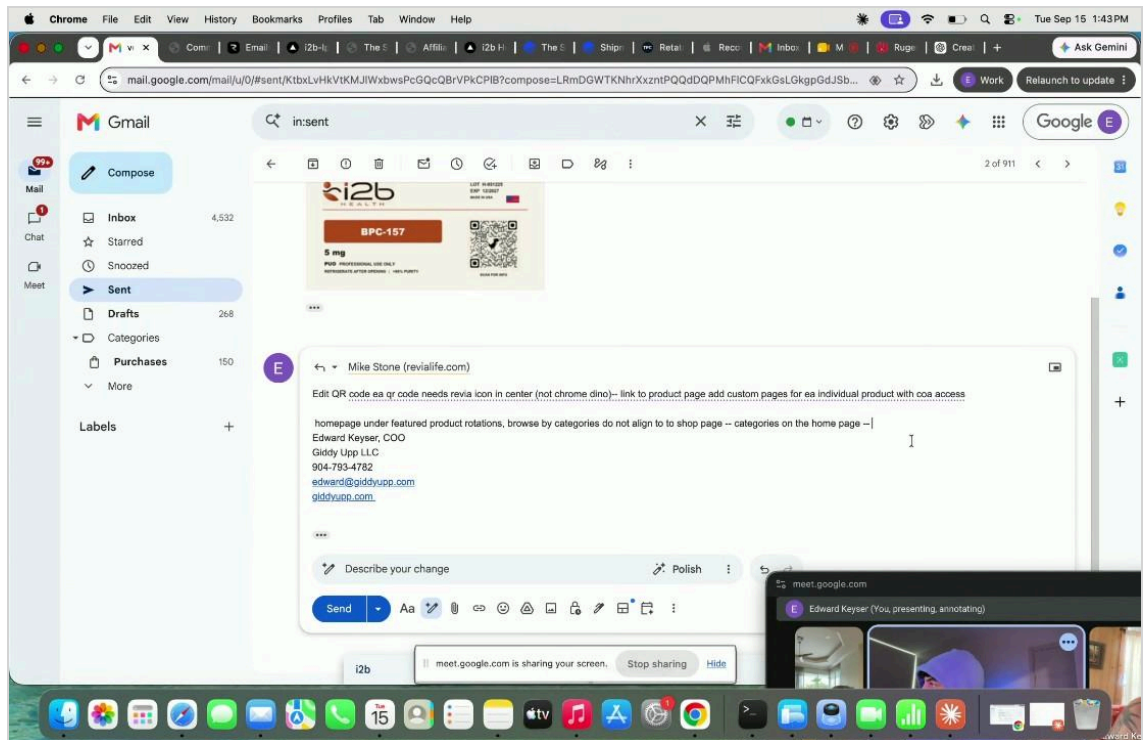

- **Research Assistant Chat Integration and Cost:** Edward Keyser explained that the "Ask a Researcher" chat widget on the bottom right of the website utilizes ChatGPT-4 Mini as the underlying large language model. Edward Keyser noted that the system is cost-effective at less than one dollar per month, consuming approximately 0.00001 cents per call, allowing for roughly 10,000 requests per dollar (00:27:16). To capture user leads from anonymous chats, Edward Keyser and Mike Stone discussed prompting users for their email address during the first model response to enable follow-up correspondence (00:28:17).

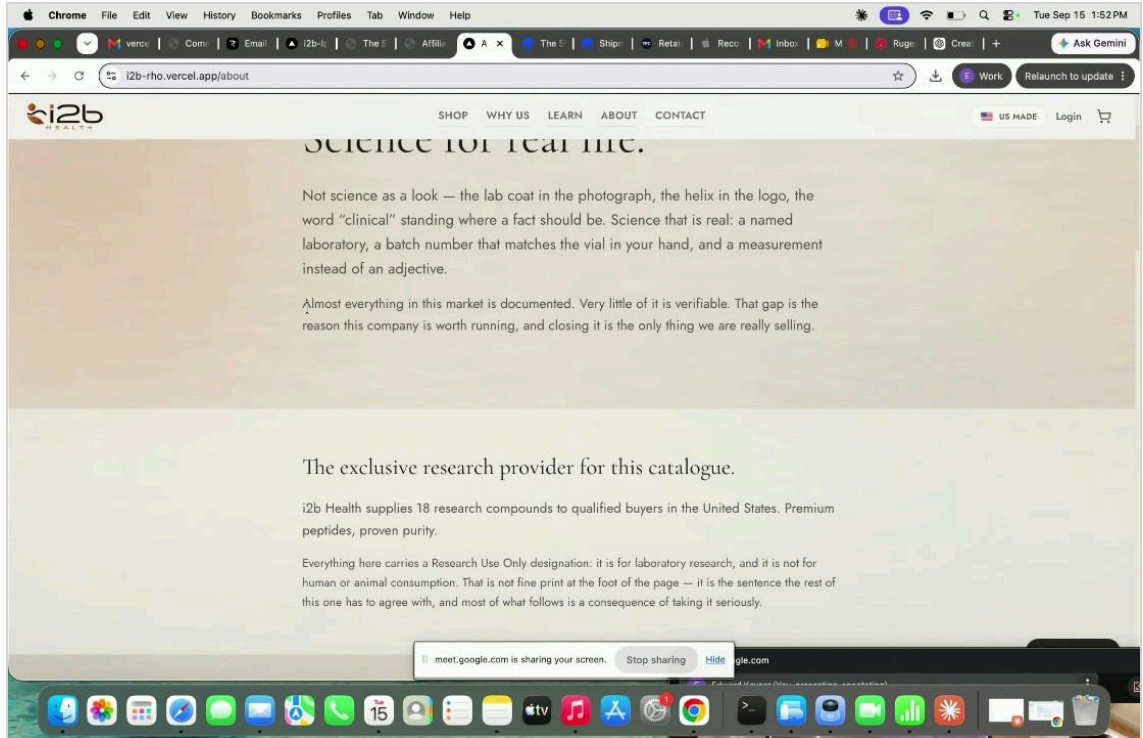

- Homepage Hero Image Rotation Timing and Product Selection:** Charlie stone noted that the hero image auto-rotation timer felt too long, and after discussing options of three to five seconds, Charlie stone and Mike Stone agreed on a three-second rotation interval, which Edward Keyser agreed to adjust ([00:30:35](#)). Charlie stone also pointed out incorrect logos and fonts on the top hero images, and Mike Stone and Charlie stone finalized the top five bestseller products to feature, opting for GHK-CU over glow and specifying bluish-purple powder visuals for GHK-CU, glow, and Kalo ([00:31:59](#)). Edward Keyser also agreed to fix a typographical error showing a stray letter "E" before the word "professional" on the hero images ([00:36:25](#)).

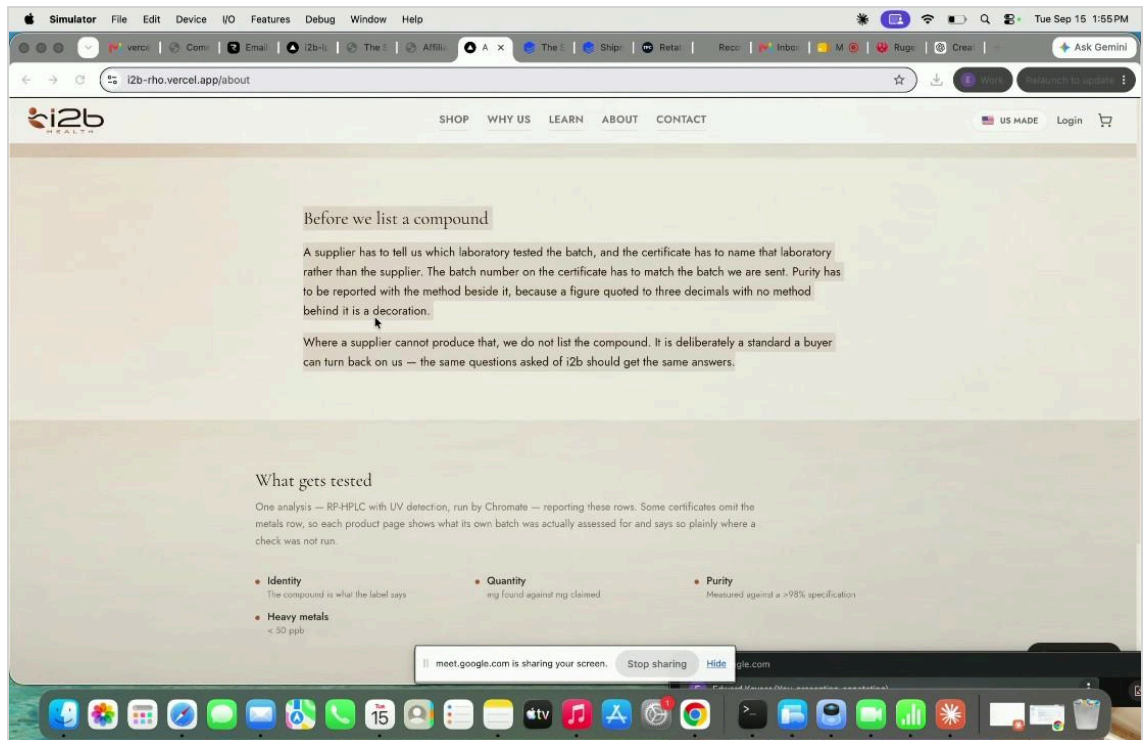

- **Homepage Category Browsing and Simplification:** Charlie stone identified issues with the homepage category section, noting that its categories differed from the shop page and clicking them resulted in no products displaying (00:41:08). Charlie stone and Mike Stone advocated for simplifying category terminology to everyday terms like sleep, tanning, longevity, biohacking, weight loss, and lean mass for general users while avoiding overly scientific jargon, and Edward Keyser agreed to align the categories according to regulatory compliance guidelines (00:42:36).

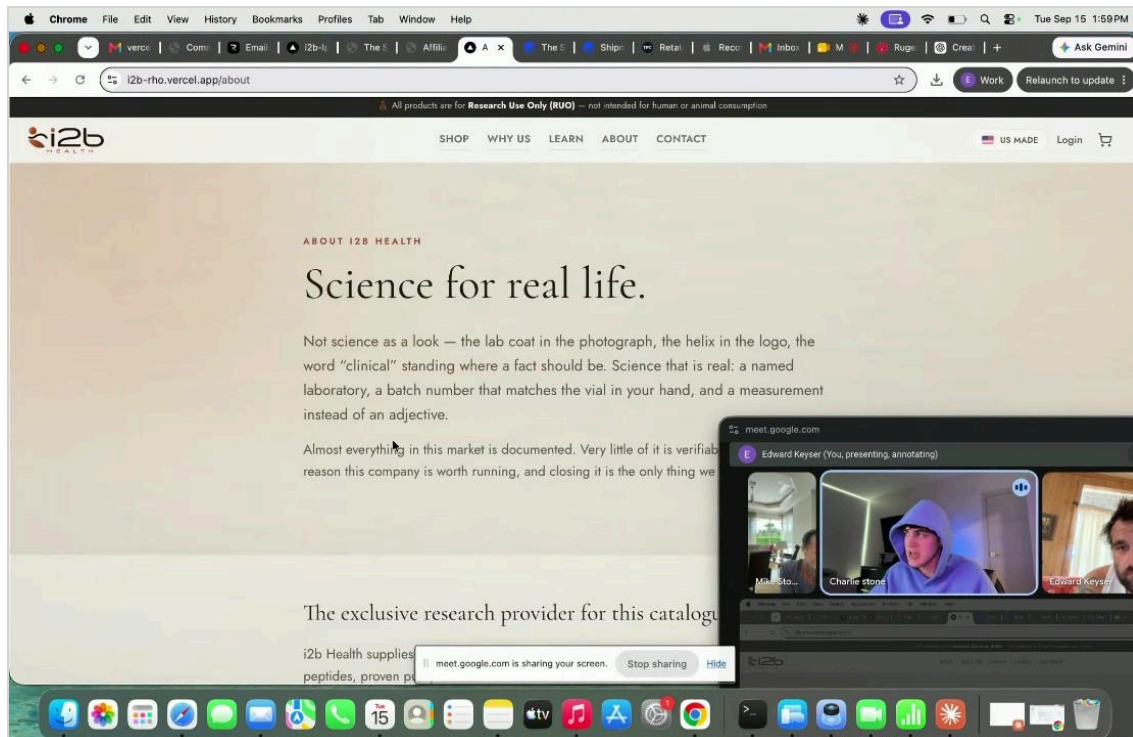

- Homepage Recent Updates Section Restructuring:** Charlie stone proposed redesigning the recently tested section on the homepage into a company news section divided into three subsections: recently tested items, new products, and company information. Charlie stone suggested using the company information section to highlight events such as Mike Stone's visit to the Food and Drug Administration, complete with redirects to video resources, which Edward Keyser noted as a good idea (00:45:07).
- About Page Redesign and Comparison Chart Integration:** Charlie stone and Edward Keyser discussed streamlining the about page by removing redundant artificial intelligence-generated text and prioritizing key statistics, such as batch testing records and United States manufacturing (00:47:26) (00:52:23). Charlie stone proposed adding a comparison chart highlighting company advantages against foreign suppliers using checkmarks to minimize heavy reading, and Edward Keyser agreed to build development branches with side-by-side variations for review (00:48:45) (00:53:33).

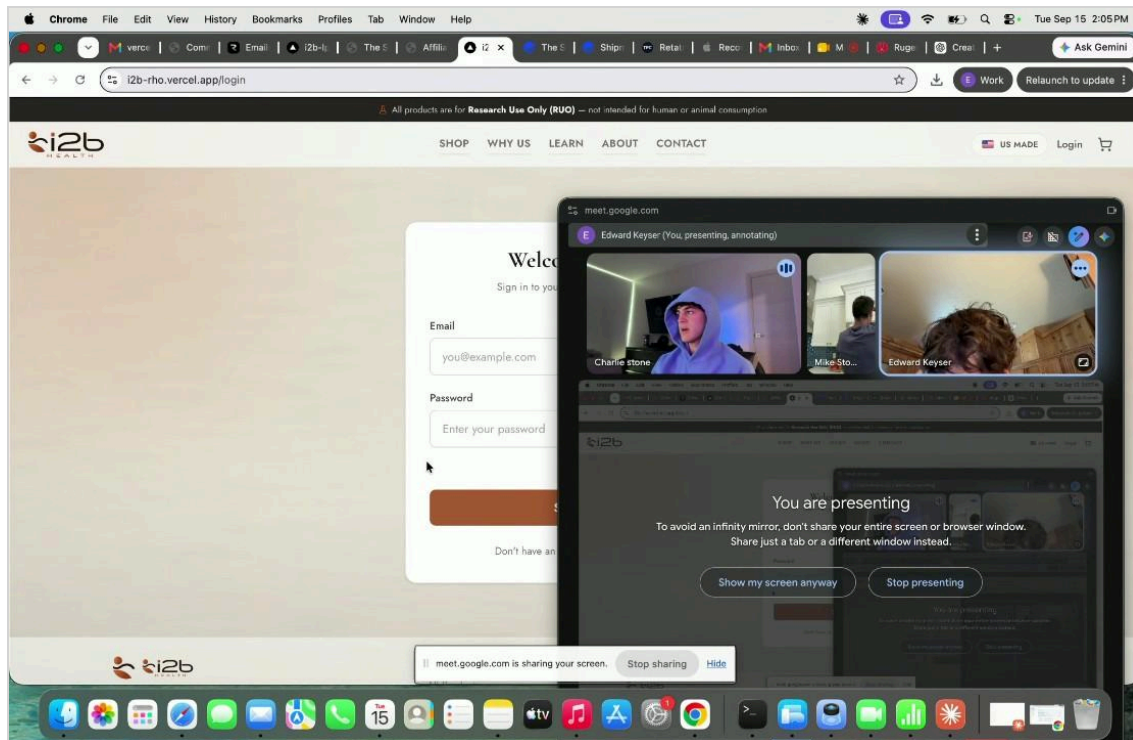

- **Footer SEO Text and Laboratory Testing Attribution:** Charlie stone and Edward Keyser discussed cleaning up public-facing text on the about page by moving technical search engine optimization details and specific lab mentions—such as Chromate laboratory testing—into hidden components, frequently asked questions, or comparison charts (00:54:55). Edward Keyser noted that indicating verified United States laboratory testing like Chromate helps address customer inquiries, and proposed linking branded certificates of analysis directly within the company record section (00:56:05).

- Website Content Separation ("Why Us" versus "About"):** Charlie stone raised the issue of information overlap between the "Why Us" and "About" pages on the website ([00:58:25](#)). Charlie stone argued that "Why Us" should focus exclusively on product highlights, testing, and lab data, while the "About" page should feature broader company highlights such as being a family-run business and focusing on real science for real life ([00:59:45](#)). Edward Keyser agreed with the separation and noted that they would use Claude to draft revisions based on Charlie stone's input. Edward Keyser committed to sending the revised drafts over for review ([01:00:42](#)).

- **AI Content Revision and Humanization Process:** Charlie Stone recommended that any text generated by artificial intelligence should be run through a free tool called "humanizer AI" to ensure it bypasses detection systems like GPTZero. Mike Stone acknowledged the recommendation, and Edward Keyser noted the instruction for processing the site text ([01:00:42](#)).
- **Navigation and UI Adjustments:** Charlie Stone proposed removing the partnership application page since they plan to proactively reach out to partners rather than accepting inbound requests. Additionally, Charlie Stone pointed out that the top-right login and cart buttons were difficult to see on a 32-inch Windows monitor running a 2560x1440 resolution ([01:03:13](#)). Edward Keyser explained that most sites scale for screen resolutions and agreed to adjust the scaling and increase the visibility of the login button by placing it to the left of the "US Made" tag ([01:04:32](#)).

- Separation of Supply Products for FDA Compliance:** Charlie stone noted that clicking "accessories" in the footer directed to a shop page displaying "no products found". Edward Keyser explained that they were actively removing and separating supply items like syringes, bacterial water, and acetic acid into a separate business-to-business supply site to comply with FDA guidelines stating that selling research peptides alongside backwater or syringes indicates human use ([01:06:52](#)).
- Article Integration and Footer/Header Slogan Tweaks:** Edward Keyser stated that article links tying back to "Revia Life" would be updated between that night and the next morning, mentioning that they increased their Claude enterprise token allocation to 2 million to improve processing speeds. Charlie stone suggested removing the redundant "science for real life" slogan from the footer and proposed adding a small, rotating slogan in the top white bar between the logo and the shop button ([01:08:03](#)).
- Newsletter Database Export:** Charlie stone inquired about where newsletter sign-up emails were being stored. Mike Stone responded that an admin Excel spreadsheet contained around 60 names alongside sign-ups from the website ([01:10:15](#)). Edward Keyser committed to running a database query to provide

Charlie stone and Mike Stone with a full snapshot export of all captured user interactions ([01:11:25](#)).

- **Asset Delivery, UI Button Scaling, and Mobile Landing Page Optimization:** Edward Keyser committed to sending hard copies of site images with magic layers and updated spacing previews for review that evening. Charlie stone noted that the "Ask a Researcher" button also needed scaling for larger screens ([01:11:25](#)). Furthermore, Charlie stone emphasized that landing pages must be optimized for mobile users, particularly iPhone users, since ad traffic will predominantly originate from mobile devices ([01:12:55](#)).
- **Portal Strategy for Revia Life and Revia Well:** Mike Stone asked about the relationship between revivalife.com, i2bhelp.com, and revia.com ([01:12:55](#)). Edward Keyser explained that Revia Life is being converted into an educational and blog resource portal featuring founder information similar to Revia Well. When Mike Stone questioned if this was reinventing the wheel, Edward Keyser clarified that the page structures already exist and required only copy-and-paste data updates, though image generation would require significant processing time ([01:13:54](#)).
- **Video Sales Letters and A/B Testing Proposal:** Charlie stone pitched the idea of using video sales letters featuring a human speaker on landing or about pages instead of plain text to improve visitor connection and trust ([01:14:54](#)). Mike Stone and Edward Keyser discussed target demographics, with Mike Stone suggesting Max or an older representative, while Edward Keyser suggested a fake doctor or testing the approach ([01:16:56](#)). Charlie stone proposed running a first-stage A/B test using alternative landing pages with different videos through ads to measure performance ([01:17:49](#)). Edward Keyser labeled this a "50/50 plan" and agreed to build baseline landing pages so video files can be easily integrated if they decide to proceed ([01:20:50](#)).
